* Fewer than 4 surveys for quartiles or 10 surveys for deciles

Column

- 1-6 Coverage of children with vaccination or vitamin A, whether from card or mother's report.
- 7-21 %s with different combinations of vaccine doses and vitamin A given on the same day.
 Estimated from: (% of children in 24m+ cohort receiving both components irrespective of day given) x (% of children with dates for both components, and both given on the same day)
 In Tables 3.1-7, figures are suppressed if the number of children with dates for both components is < 100. This is because vitA was not given or there were no/few dates reported.
- 22 Whether this study was included in the overall analysis, yes or no (Tables 3.1-3.7 only)

Table 3.0b: 1. Coverage for each vaccine alone
2. Percentages of children given 2 doses of vaccine, or a vaccine + vitamin A, on the same day.
Median, and upper quartile and decile values for surveys in each region or subregion; by sex and rurality; and overall.

Table 3.8

1. Coverage for each vaccine alone
 2. Percentages of children given 2 doses of vaccine, or a vaccine + vitamin A, on the same day.
 For pairs of earlier and later country surveys, and with median values and differences overall.

			1							2															
			Coverage by each vaccine alone						For children given both vaccines, % given on the same day
